ADAM SKITT

AEROSPACE ENGINEER

5 years' experience in satellite communications, specialising in simulation, modelling and analysis using Python. Highly motivated, organised, and dependable professional with a proven ability to thrive independently or in teams.

SOFTWARE

	PROFICIENCY
Python (Data Analysis)	
Jupyter Notebook	
SQL	
Git	
GCP/AWS	
Microsoft Office	
Jira	
Apache Airflow	

EDUCATION

Swansea University

First Class MEng (Hons) With a Year in Industry

2018 - 2019

Master of Aerospace Engineering

2014 - 2018

Bachelor of Aerospace Engineering

PROFESSIONAL CAREER

2024 - Present

Capacity Forecasting Engineer

Viasat +Inmarsat

Worked on forecasting satellite supply and demand to support both day-to-day operations and long-term strategy. Helped develop models that combined current and future satellite capacity (both owned and leased) with projected demand from different business units, helping the team identify where and when extra capacity would be needed. Also handled ad-hoc requests that fell outside standard tools, using Python and geospatial data like beam footprints and H3 grids to build custom reports, visualizations, and insights.

2021 - 2024

Systems Architect

Viasat +Inmarsat

Joined the Networks Architecture team working independently on the simulation and modelling of the network. This involved reviewing and improving all the link budget analysis tools, while also handling any requests. As a part this, developed a self-service site using Jupyter notebooks, widgets, docker and GCP app engine. Providing a clean user interface that behind the scenes calculated expected throughput as a function of location based on a complete link budget calculation from satellite antenna directivity files and terminal specs.

2019 - 2021

Technical and Engineering Graduate

inmarsat

User Terminals & Core Modules

GX Terminal Fraud Tool: Developed a real-time Python-based monitoring tool and dashboard to analyse RF performance data from GCP BigQuery, identifying underperforming terminals and presenting insights to stakeholders.

Operations Frequency Planning
Satellite Resource Engineer: Supported satellite capacity management through automated Python reporting tools. Migration of key reports to GCP BigQuery, and ad-hoc capacity analysis to optimize resource utilization.
Operations Service Assurance Systems
SwiftBroadband Safety & Alarms: Built interactive Tableau dashboards to visualize aircraft and network performance data, improving visibility of system alarms.
Quality Assurance
Interface Control Document Consolidation & Type Approval: Coordinated cross-team efforts to consolidate technical documentation and define mandatory test requirements, ensuring the accuracy and future-readiness of the Fleet Xpress (global Maritime broadband service) ICD.

ADDITIONAL RESPONSIBILITIES

2024 - Present

Employee Forum Representative

As a member of the employee forum, I represented colleagues from the engineering office, providing input on potential workforce changes and acting as a bridge between staff and leadership. This role enhanced my communication and negotiation skills, while giving me greater insight into organisational strategy and decision-making. It also expanded my internal network and increased my visibility within the company, contributing to both personal and professional development.

2021 - Present

Matlab License Admin

Have been the Matlab admin for the UK workforce managing the licenses and toolboxes. Liaising with Mathworks reps and managing internal stakeholders, finding the appropriate budget and raising purchase orders.

2022 - 2023

Environmental and Sustainability Committee

Worked with Carbon Intelligence to help reduce our environmental impact and become the first company to deliver a net zero end-to-end satellite build and launch (I6F2). Conducted a CO2e assessment of the project and offset emissions by investing in verified climate initiatives, including forest conservation in Indonesia (REDD+), solar infrastructure in Rwanda, mangrove restoration in Mexico, and reforestation in Ghana. While offsetting is not a perfect solution, it was the most viable option given the lack of carbon neutral alternatives for launches.

EXPERIENCE

2016 - 2017

Mechanical Analysis Intern

AIRBUS DEFENCE & SPACE

During my Year in Industry I was a Mechanical Analysis Intern in the Stress Analysis Department at Airbus Defence and Space Stevenage, I was tasked to improve the dynamic analysis process. I gained proficiency in Femap, Isight, and Nastran, and independently managed a project comparing industry tools to recommend best practices. I developed an innovative coded solution that reduced modal mass mapping time from 3.5 hours to 5 seconds, and created an automated ISIGHT program for spacecraft modal and sine response analysis. My work was presented to over 50 engineers and senior managers, receiving highly positive feedback.
